

Family Support Grades K-5

Big Ideas Learning is committed to supporting students and their families at every step of their *California Math & YOU* journey.

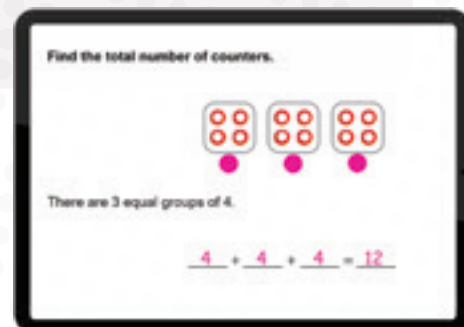

Big Idea of the Chapter

Make math meaningful and relevant for students with the Big Idea of the Chapter. This **at-home activity** helps students focus on the big picture mathematics and how it can apply to their daily lives. Additionally, there are short videos featuring one of our authors, Nick Lopez or Dr. India White, talking informally to students and their families about the Big Idea of each chapter.

Instructional Support

Practice pages in Grades K-5 include **QR codes** that link to lesson pages, so families have insight into how the content was taught in class. Starting in Grade 3, students and families have access to tutorial videos to support practice and homework exercises.

Family Resources

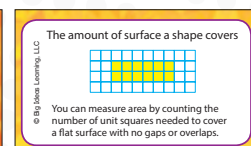

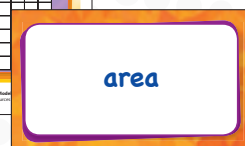

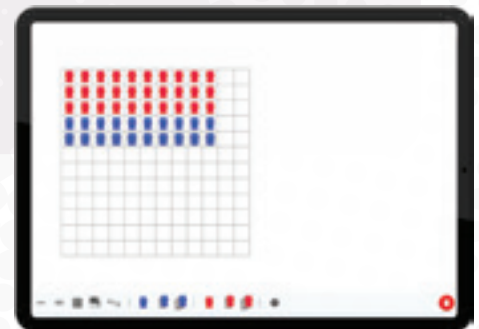

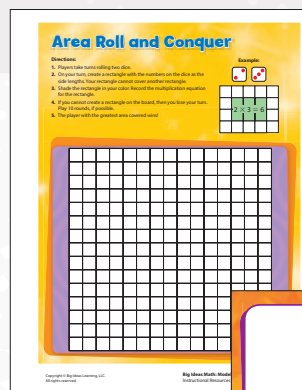

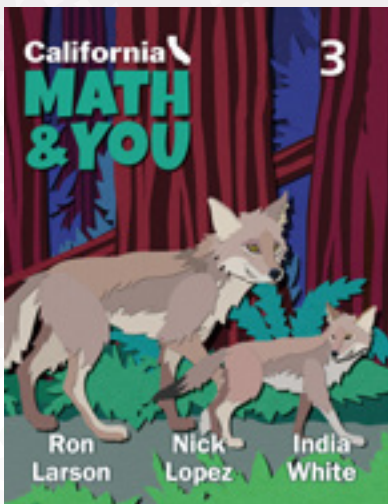

Family Letters and the **Multi-Language Glossary** are available in 16 languages, including Spanish, providing families with the information and tools they need to help their students succeed. Each chapter has a letter describing how families can use everyday tasks and activities to reinforce the math concepts that their student is learning.

The **Game Library** contains English and Spanish interactive games with audio, making math fun! There are several games and activities that are not only enjoyable but also reinforce the math skills a student is learning.

Easy Access Student Edition

Families have access to everything that their student does in the *California Math & YOU* digital experience. Family members may use any of the resources to help their student with homework or to prepare for tests and quizzes.
